

INFRARED GAS ANALYZER

DATA SHEET

ZRE

This gas analyzer (ZRE) is capable of measuring the concentration of NO,SO₂,CO₂,CO,CO,CH₄ and O₂ components in sample gas. NO,SO₂,CO₂,CO and CH₄ are measured by non-dispersion infrared method (NDIR), while O₂ is measured by fuel cell, or zirconia method. Up to 5 components including O₂ can be measured simultaneously. This analyzer is designed with smaller physical dimensions. It is well suited for compact analyzing system designs.

In addition maintenance is simplified through adoption of the single-beam system.

Optimum use as an analyzer unit of measurement system for combustion exhaust gas from refuse incinerator and boiler, or gas from various industrial furnaces.

1. Small and light

The size is small $133 \times 483 \times 418$ mm (H×W×D) and light (8kg).

But it is capable max. 5 component measurement in one analyzer.

2. Easy maintenance

Because of single-beam system the measurement unit is simple with no need for optical adjustment. Therefore, maintenance is easy.

3. Easy operation

Operation can be carried out smoothly in an interactive way through a large-size LCD.

4. Abundant functions

Various optional functions are available such as auto calibration control, high and low concentration alarm, remote range switch, and range identification signal, etc.

SPECIFICATIONS

Standard Specifications

Principle of measurement:

NO, SO₂, CO₂, CO, CH₄ ;

Non-dispersion infrared-ray absorption method

- Single light source and single beams (single beam system)
- O₂ ;Fuel cell O₂ sensor (built in) or zirconia O₂ sensor (externally installed TYPE: ZFK7) (Built in paramagnetic O₂ sensor will be next revision.)

Measurable gas components and measuring range:

	Minimum range	Maximum range
NO	0 - 200ppm	0 - 5000ppm
SO ₂	0 - 200ppm	0 - 10vol%
CO ₂	0 - 100ppm	0 - 100vol%
CO	0 - 200ppm	0 - 100vol%
CH ₄	0 - 500ppm	0 - 100vol%
O ₂ (built in (fuel cell)	0 - 10vol%	0 - 25vol%
O ² (built-in Paramagnetic) (External Zirconia)	0 - 5vol%	0 - 25vol%

- Max. 5 components measurement including O₂.
- Measuring range ratio max. 1:10
- Measuring ranges are changeable between the specified minimum and maximum range

Settable one range or two ranges

• For possible combinations of components and ranges, refer to Table 1.

Measured value indication:

Digital indication in 4 digits (LCD with back light)

- Instantaneous value of each component
- Instantaneous value after O₂ correction (only in NO, SO₂, CO measurement with O₂)
- Average value after O₂ correction (only in NO, SO₂, CO measurement with O₂)
- O2 average value

Analog output signals:

4 to 20mA DC or 0 to 1V DC,

isolated internally from circuit and ground; 12 outputs max.

max. load 550 Ω for 4 to 20 mA DC min. load 100 k Ω for 0 to 1V DC

* Refer to Table2 for the channel No. of displayed values and analog output signals.

Fuji Electric Co., Ltd.

EDS3-133h Date Jul. 7, 2016

Analog input si	anal	
	For signal input from externally installed	
	O_2 sensor.	
	Signal requirement;	
	(1) Signal from Fuji's Zirconia O₂ sensor	
	(TYPE: ZFK7)	
	(2) 0 to 1V DC from an O_2 sensor	
	Input section is not isolated. This	
	feature is effective when an O ₂ sensor	
	is not built in.	
	* Externally installed O ₂ sensor should be	
	purchased separately.	
Digital output:		
Digital output.	1c contact (24V DC/1A, resistive load)	
	max.15 outputs	
	Instrument error, calibration error, range	
	identification, auto calibration status,	
	High/Low limit alarm contact output	
	* All relay contacts are isolated mutually	
	and from the internal circuit.	
Digital input: (C		
	Voltage contact (Supply 12 to 24V DC/15mA	
	max. at ON) max. 9 inputs	
	Remote range switch, auto calibration	
	remote start, remote holding, average	
	value resetting, Isolated from the inter-	
	nal circuit with photocoupler.	
Power supply:	Voltage rating ; 100V to 240V AC	
	Allowable range ; 85V to 264V AC	
	Frequency ; 50Hz/60Hz	
	Power consumption ; 100VA max.

Standard Functions

Standard Fu	nctions
Output signal h	olding:
	Output signals are held during manual and
	auto calibrations by activation of holding
	(turning "ON" its setting).
	The output to be held are the ones just
	before start calibration mode or setting
	value.
	lt is selectable.
	Indication of instantaneous values will not
	be held.
Switch ranges:	The switch ranges function is available in
	manual, auto, and remote modes. Only
	preset switch method is effective.
Manual:	Allows range to switch by key opera-
Δ.	tion.
Auto:	Allows range to switch from low to high
	range when 90%FS or more is available
	in the low range.
	Allows range to switch from high to low
	range when 80%FS or less is available in
Domate	the low range.
Remote:	Voltage contact input (for measurable
(Option)	components)
	Allows range to switch via an external
	signal when remote range switch input is received.
	When the contact input terminals for
	each component are input voltage, the
	first range is selected, and it is switched
	to the second range when the terminals
	are open.
	range value are settable between original nge and second range.
Optional Fu	nctions
Remote output	holding:
	Output signal is held at the latest value or
	setting value by voltage input the remote
	output holding input terminals.
	Holding is maintained while the voltage
	input the terminals. Indication of instan-
	taneous values will not be held.
Range identifica	ation signal:
	The present measuring range is identified
	by a contact signal.
	The contact output terminals for each
	component turn on when the first range
	is selected, and when the second range
	is selected, the terminals are open.
Auto calibratior	1:
	Auto calibration is carried out periodically
	at the preset cycle.
	When a standard gas cylinder for calibration
	and a solenoid valve for opening/closing
	the gas flow line are prepared externally
	by the customer, calibration will be carried
	out with the solenoid valve drive contacts
	for zero calibration and each span calibra-
	tion turned on/off sequentially at the set
	auto calibration timing.
	auto campiation tinning.
Auto calib	pration cycle setting:

Auto calibration cycle is set. Setting is variable within 1 to 99 hours (in increments of 1 hour) or 1 to 40 days (in increments of 1 day).

Gas flow time setting: Correction formula: The time for flowing each calibration gas $C = \frac{21-On}{21-Os} \times Cs$ in auto calibration is set. Settable within 60 to 900 seconds (in increments of 1 second) C $\,$: Sample gas concentration after O_2 Auto calibration remote start: correction Auto calibration is carried out only once Cs : Measured concentration of sample according to an external input signal. Caliaas bration sequence is settable in the same Os: Measured O₂ concentration (Limit way as the general auto calibration. setting: 1 to 20% O₂) Auto calibration is started by opening the Ov : Reference O₂ concentration auto calibration remote start input termi-(value changeable by setting.0 to nals after input voltage for 1.5 seconds or 19% O₂) Average value after O₂ correction and O₂ average value longer. Auto zero calibration: calculation: Auto zero calibration is carried out periodi-The result of O₂ correction or instantaneous cally at the preset cycle. O2 value can be outputted as an average This cycle is independent on "Auto calibravalue in the preset period of time. tion" cycle. Used for averaging is the moving average method in which sampling is carried out When zero calibration gas and solenoid valve for opening/closing the calibration at intervals of 30 seconds. gas flow line are prepared externally by (Output is updated every 30 seconds. It is the customer, zero calibration will be the average value in the determined period carried out with the solenoid valve drive of time just before the latest updating.) contact for zero calibration turned on/off Averaging time is settable within 1 to 59 at the set auto zero calibration timing. minutes (in increments of 1 minute) or 1 Auto zero calibration cycle setting: to 4 hours (in increments of 1 hour). Auto zero calibration cycle is set. Average value resetting: Setting is variable within 1 to 99 hours (in The above-mentioned output of average increments of 1 hour) or Setting is variable value is started from the initial state by within 1 to 40 days (in increments of 1 opening the average value resetting input day) terminals after input voltage for 1.5 sec-Gas flow time setting: onds or longer. The timing for flowing zero gas in auto Output is reset by input voltage and rezero calibration is set. started by opening Settable 60 to 900 seconds (in increments Communication function: RS-485 (9pins D-sub) or USB (Type-B) of 1 second) High/low limit alarm: Half-duplex bit serial Alarm contact output turns on when mea-Start-stop synchronization surement value reach the preset high or ModbusTM protocol low limit alarm value. Contents : Read/Write parameters Contacts turn on when the channel value Read measurement conof each channel exceeds the high alarm centration and instrument limit value or falls below the low alarm status limit value. Remark : When connecting via RS-Instrument error contact output: 232C interface, an RS-232C Contacts turn on at occurrence of analyzer ↔ RS-485 converter should error No. 1, 2, 3 or 10. be used. Calibration error contact output: Contacts turn on at occurrence of manual Performance or auto calibration error (any of errors No. 4 to 9). Repeatability: ±0.5% of full scale Auto calibration status contact outputs: Linearity: ±1% of full scale Contacts turn on during auto calibration. Zero drift: ±2% of full scale/week In the case of auto zero calibration use O₂ correction: Correction of measured NO, SO₂ and CO for 500 ppm or less range gas concentrations into values at reference Span drift: ±2% of full scale/week O2 concentration Response time (for 90% FS response) : 1 to 15 sec electrical response

Within 60 seconds including replacement ime of sampling gas (when gas flow rate is 0.5L/min)

Gas replacement time depends on the number of measuring components, and measuring range.

EC Directive Compliance

The product conforms to the requirements of the Low Voltage Directive 2006/95/EC and EMC directive 89/336/EEC (as amended by Directive 92/31/EEC), both as amended by Directive 93/68/EEC.

It conforms to following standards for product safety and electromagnetic compatibility ;

EN61010-1 : 2001 Safety requirements for electrical equipment for measurement, control and laboratory use. "Installation Category II" "Pollution Degree 2"

EN61326-1 : 1997, AI: 1998, A2: 2001, A3: 2003 Electrical equipment for measurement, control and laboratory use — EMC requirements. C €

Standard Requirements for Sample Gas

Flow rate: Temperature:	0.5L / min ±0.2L / min 0 to 50°C
Pressure:	10 kPa or less (Gas outlet side should be open to the atmospheric air.)
Dust:	100 µg/Nm ³ or less in particle size of 0.3 µm or less
Mist:	Unallowable
Moisture:	Below a level where saturation occurs at room temperature (condensation unallow-
	able).
	Below the level where saturation occurs
	at 2°C for CO measurement in 0 to 200
	ppm range, NO measurement, and SO_2
	measurement.
Corrosive com	ponent:
	1 ppm or less
Standard gas for	or calibration:

- Zero gas ; Dry N₂
 - Span gas ; Each sample gas having concentration 90 to 100% of its measuring range (recommended).

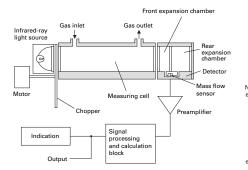

In case a zirconia O₂ analyzer is installed externally and calibration is carried out on the same calibration gas line:

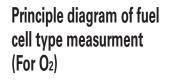

- Zero gas ; Dry air or atmospheric air
- Span gas ; For other than O₂ measurement, each sample gas having concentration 90 to 100% of its measuring range For O₂ measurement, O₂ gas of 1 to 2 vol%/remains N₂ gas

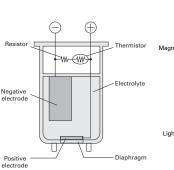

Installation Requirements

- Indoor use (Select a place where the equipment does not receive direct sunlight, draft/rain or radiation from hot substances. If such a place cannot be found, a roof or cover should be prepared for protection.)
- Avoid a place where unit receives heavy vibration
- Select a place where atmospheric air is clean

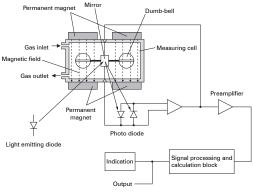

Principle diagram of NDIR type measurement (For CO₂, CO, CH₄, SO₂, NO)

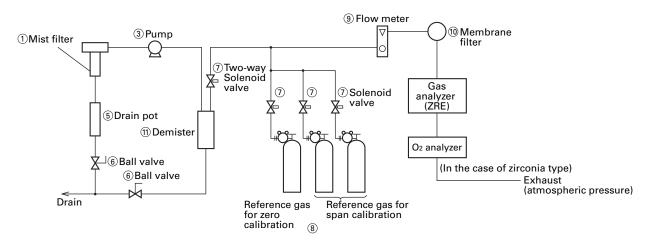

Principle diagram of paramagnetic type measurment (For O₂)

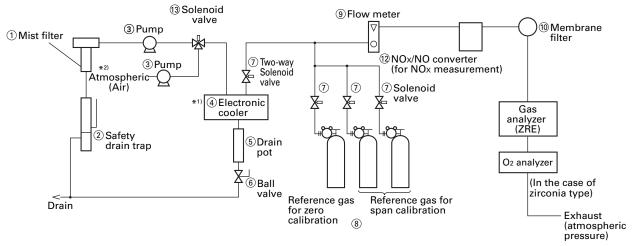

Examples of sampling system configuration including gas analyzer

To measure low moisture content (saturated at room temperature or lower) sample gas (CO, CO₂, CH₄)

To measure high moisture content sample gas, NO, SO₂, or CO (0 to 200 ppm range)

*1) Be sure to use a dehumidifier such as electronic cooler for NO, SO₂, and CO analyzers of 0 to 200 ppm range (≒2°C saturation or lower).

*2) Be sure to use auto zero calibration, in the case of 500 ppm or less range.

List of sampling devices (example)

No.	Device name	Fuji's type
1	Mist filter	ZBBK1V03-0
2	Safety drain trap	ZBH51603
3	Pump	ZBG80
4	Electoric cooler	ZBC91003
5	Drain pot	ZBH13003 (Length 255mm)
6	Ball valve	ZBFB1
$\overline{\mathcal{O}}$	Two-way solenoid valve	
8	Standard gas for calibration	ZBM Y04-0 (Codes in to be selected depending on application)
9	Flow meter	ZBD42203
10	Membrane filter	ZBBM2V03-0
11	Demister	ZBH35003
12	NO ₂ /NO converter	ZDL02001
13	Three-way solenoid valve	

Note) The above is a typical configuration example. As configuration may differ depending on measuring objects, please consult us.

note1) "A. Cal." must be specified at 22nd digit, in the case of 500 ppm or less range.

note2)When only O_2 measurement is necessary, "Y" should be specified at the 6th digit.

note3)When "1" is specified at 7th digit, O₂ pt sensor signal has to be set as 0-1V DC linear corresponding to full scale.

External zirconia O₂ sensor and external O₂ analyzer are not included in the scope of supply, and has to be separately ordered.

note4)Refer to Tables 1 for possible combination of measuring components and ranges in the data sheet.

When "Y" is specified at 6th digit, "Y" should be specified at 9th to 16th digit.

note5)O $_2$ correction is calculated only for NO, SO $_2$ and CO

note6)When 5 components measurement is specified, "H" must not be specified at 22nd digit.

When 4 components measurement is specified and "H" is specified at 22nd digit, 3 point is maximum for alarm output function.

note7)When "B" is specified at 24th digit, measuring range should be specified by ppm range code.

In this case NO,SO₂ and CO measuring range are corresponding range in mg/m³.

Please refer to the table shown below for the corresponding range code based on "mg/m3".

note8)When A to D is specified on the 25th digit, the analyzer will be adjusted and delivered with the following gasses.

Standard "A": balance gas $N_{\rm 2}$

For heat treatment furnace "C": balance gas $30\,\%\,H_2$ / remains N_2

For converter "D": balance gas CO, CO2

When other adjustment is required, please specify "Z",

When "Z" is specified, please attach a list of gas composition contained in the measuring gas.

note9)When the 25th code is "C", the range code "X" and "R" are not available.

Corresponding mg/m ³									
	Corresponding range in mg/m ³								
Range code	Unit : ppm	NO	SO ₂	CO					
С	0-200ppm	0-260mg/m ³ 0-570mg/m ³ 0-250mg/m ³							
D	0-250ppm	0-325mg/m ³	0-700mg/m ³	0-300mg/m ³					
S	0-300ppm	0-400mg/m ³	0-850mg/m ³	0-375mg/m ³					
E	0-500ppm	0-650mg/m ³ 0-1400mg/m ³ 0-600mg/n							
F	0-1000ppm	0-1300mg/m ³	0-2800mg/m ³	0-1250mg/m ³					
G	0-2000ppm	0-2600mg/m ³	0-5600mg/m ³	0-2500mg/m ³					
U	0-2500ppm	0-3300mg/m ³	0-7100mg/m ³	0-3000mg/m ³					
Т	0-3000ppm	0-4000mg/m ³	0-8500mg/m ³	0-3750mg/m ³					
Н	0-5000ppm	0-6600mg/m ³	0-14.00g/m ³	0-6250mg/m ³					

The conversion formula "ppm" unit into "mg/m³" unit. NO (mg/m³) = $1.34 \times NO$ (ppm) SO₂ (mg/m³) = $2.86 \times SO_2$ (ppm) CO (mg/m³) = $1.25 \times CO$ (ppm)

Table 1 Measurable component and range - availability check table -

Procedure of range selection

On one component analyzer:

First determine 1st range, then select 2nd range from the right of your determination range in following tables. More than two components:

The procedure is same as one component. Difference is 2nd range in the tables.

The 2nd range in the tables for two and more components is maximum available range.

2nd range is selectable from 1st range to 2nd range(max) on the table.

* When the 21st digit code is A or C, the component of the NO analyzer is displayed as NOx.

OUTLINE DIAGRAMS (Unit : mm)

<Top view>

Note 1) Used for special case.

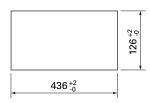

Mounting method

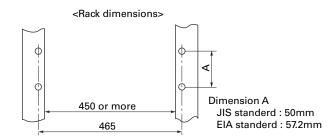

The analyzer weight should be supported at the bottom of the case.

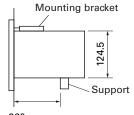

Panel mounting type

19-inch rack mounting type

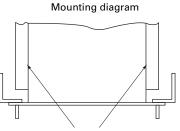

260 or more

* 70% or more of the analyzer weight should be supported at the bottom of the case. (In case of mounting panel or 19-inch rack provide a support at the end of casing.)

h 0 þ Guide rails

0

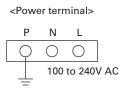

EXTERNAL CONNECTION

<Analog output> A/O connector

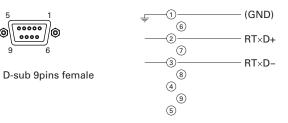

D-sub 25pins female

* In standard, displayed Channel No. and Analog Output No. are same.

SCOPE OF DELIVERY

- Gas analyzer ... 1 unit
- Replacement fuse (250V, 2A AC, delay type) ... 2 pcs
- Instruction manual ... 1 copy
- Connector for I/O connection ... 1 set
- Panel mounting fixtures (in case panel mounting) ... 2 pcs

2. Application and composition of sample gas

Exclusive Zirconia O₂ Sensor (to be purchased separately)

For O_2 correction, the gas analyzer ZRE can accept linearized 0 to 1V DC signal coming from analyzer calibrated 0 to 25% O_2 full scale. If the analyzer is not available, Fuji can supply exclusive Zirconia O_2 sensor Model ZFK. Measuring method:

Zirconia system

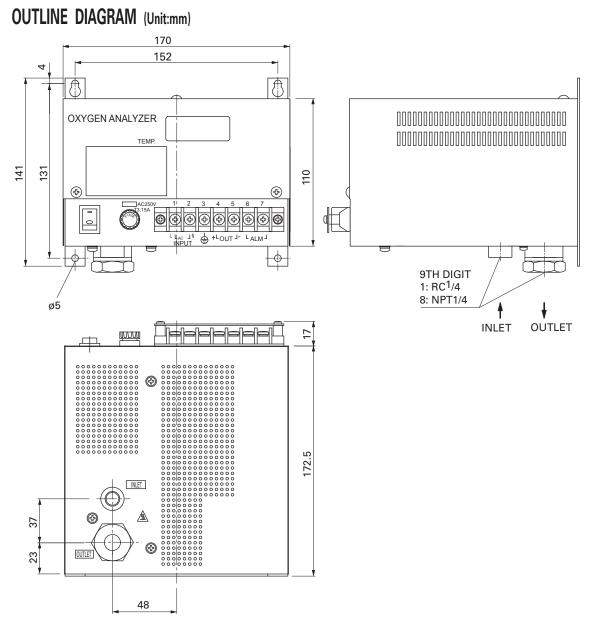

Measurable componen	t and measuring range:
---------------------	------------------------

		mododning rango.			
Measurable	component	Range			
O ₂	Oxygen	0 to 25vol%			
Repeatability: Linearity: Zero drift: Span drift: Response time:	Within \pm 0.5% of full scale Within \pm 1% of full scale Within \pm 1% of full scale/week Within \pm 2% of full scale/week Approx. 20 seconds (for 90% response)				
Measured gas f					
	0.5 ± 0.25L Remark: The Z may p tive c O ₂ ga (SO ₂ c	/ min Zirconia system, due to its principle, produce a measuring error due to rela- oncentration versus the combustible s concentration. Also, a corrosive gas of 250 ppm or more, etc.) may affect fe of the sensor.			
Gas inlet/outlet	size:				
	Rc1/4 or NP	T1/4			
Power supply:	Rated frequ	ge ; 100 to 115V AC or 200 to 240V AC ency ; 50Hz/60Hz power; 215VA (during power ON) 65VA (during steady- state operation)			
Enclosure: Indication: Temperature ala	Temperature arm output: Contact out	g, for indoor application e indication (LED) put 1a contact,			
		pacity 220V, 1A AC (resistive			
Outer dimensio	load) ns (H x W x I 141 x 170 x	•
